VOLUME ONE

PREFACE

Well aware of the responsibilities imposed by a work of extreme accuracy such as the preparation of the Official Report, and in an effort to attain a clear, comprehensive, and precise documentation, we have not failed to refer to all possible sources of technical and statistical information.

The overall pattern of the Games of the XVII Olympiad, as described in the various reports and commentaries, will be shown by the collection of data and details, figures and graphs which record and analyse works and results and will serve to give us an unforgettable memory of the protagonists as well as to provide evidence of the efforts undertaken in organizing the Rome Olympic Games.

This documentation attempts to illustrate events and general aspects of the work undertaken during the four-year period of preparation. In this way, the description of the organization in all its technical and human aspects, offers a clear and comprehensive picture of the ability of the organizers and shows, once more, that sport has now reached the extreme limits of human achievement.

It must be remembered that one of the aims of the Official Report is that of re-evoking the epic atmosphere of the Games in all their spectacular grandeur; it is also intended to recall the keen competitive spirit among countless protagonists who have now become historic figures in the life of the Olympiads.

It is no easy task to indicate the amount of patient work and alternating hopes that the solution of the thousand and one problems in connection with so vast an undertaking cost the organizers, a task which was not only of a technical and organizational nature. However, with an ever-present consciousness of the responsibilities assumed, we have attempted to complete a work which justifies the effort of the organizers. It is under this aspect, therefore, that we have faithfully reproduced data, documents, and the experiences lived by all in all fields. It is here that our completed work is produced in a condensed form and the material we have collected, selected, and checked is registered with the comforting support of figures.

The Report consists of two volumes: the first contains a documentation of the organizational sector whilst the second contains the results of the competitions.

The photographic documentation, carefully, and appropriately selected illustrates facts and protagonists in picturesque and realistic form such as an historical work of this nature calls for.

The compiling of the two volumes required twenty-four months of patient work. Should there be cause anywhere for complaint, it should be pointed out that data in respect of the athletes from the eighty-four countries did not always reach the Organization in a clear manner both as regards writing as well as to correctness of information.

We are, however, comforted by the certainty that this work will render good service in the spreading of the Olympic ideal and to those who are now endeavouring to face the difficult task of organizing the Olympic Games to come.

THE OLYMPIC
VENUES

Long before the Games of the XVII Olympiad were assigned to Rome, the C. O. N. I. had already made a careful study of the sports venues that would be required for the great event. In this respect, on 20th October 1954 the Executive Board of the C.O.N.I. decided to set up an appropriate Technical Committee known as " Rome Olympic Constructions " (C.O.R.).

The C.O.R. first of all attended to, in agreement and in close co-operation with the Rome Municipality and the Ministry for Public Works, finding suitable areas for both venues and the Olympic Village and rapidly set out various plans and technical elaborations in this respect. At that time, there only existed the Olympic Stadium which had been inaugurated two years previously and which came into being under the auspices of the Secretary-General of the C.O.N.I., Mr. Bruno Zauli.

The C.O.R. was placed in the charge of Mr. Mario Saini, Vice Secretary-General of the C.O.N.I. who was also Technical Director of the Games; Secretary of the C.O.R. was Ing. Luciano Berti, recently deceased, who dedicated the greater part of his life to the various problems connected with sports venues. The C.O.R. made use of the services of Prof. Ing. Cesare Valle of the Ministry for Public Works and Ing. Francesco Allegra, Secretary-General of the National Institute for the Housing of State Employees (I.N.C.I.S.) as technical consultants and also consulted the finest Italian technicians on the various problems as and when they arose.

Above all, the C.O.R. received considerable help from the Minister for Public Works at that time, Mr. Giuseppe Togni, who succeeded in overcoming the tremendous difficulties of that period with enthusiasm, competence and dedication.

Besides the problem of the sports venues and the Olympic Village, which will be illustrated later, the C.O.R., in co-operation with the Ministry of Posts and Telegraphs and the Tirrena Telephone Company, planned and executed the whole of the communication network as well as telephone, telegraph and radio communications. It also set up the various Press Centres, an extremely

complicated work which took over two years to complete, which proved extremely satisfactory as, during the Games, they were a means of keeping the Press informed with a speed such as has never been reached up to now.

Another sector which the C.O.R. managed to put into operation in time in each venue, was that of the visual and acoustic communication service for the public, a service which enabled spectators to receive results of the various events with extreme rapidity and clearness immediately after the various Juries had compiled them.

But perhaps the greatest satisfaction afforded those responsible for the sports venues was that, once the Games were over, the venues that had been prepared for the event today become an ever-increasing attraction to Roman youth which frequents them with great enthusiasm, filled with the memories of the success of the Rome Olympiad.

Overall organisation of the work.

The general criterion followed by the C.O.R. (Rome Olympic Constructions) in the organisation for the construction of venues necessitated dividing up the work into three sectors, that is, the venues under construction were classified under three categories:—

- (a) competition venues;
- (b) subsidiary venues;
- (c) Olympic villages.

Venues where the Olympic competitions were held and where training took place fell under the first two categories. Also classified under these two categories was the work of improvement, re-laying and adaptation of venues already in existence. The third category included lodgings for athletes and competition officials, accompanying personnel, etc. The C.O.R. enforced certain directives for all venues, both for those to be newly built as well as those requiring improvements, and therefore stipulated that:—

(a) improvements of luxury or of high cost were to be avoided and that the aim was to create functional venues to be run at a minimum cost. One exception was made, i.e. for the Palazzo dello Sport because of the type of events to be held there and the particular area where it was to be built;

(b) the construction of venues on privately owned land was to be avoided, preference being given to land of municipal or State property which could be subject to negotiation between the C.O.N.I. and interested authorities;

(c) the subsidiary venues to be used should be those, as far as possible, already in existence and which could be easily adapted or improved upon;

(d) account should be taken of the capacity for the public in occasion of the Olympic Games and future use of the venue once the Games were over.

A detailed estimate of expense was prepared for each and every project and all estimates were carefully examined and approved by the Executive Board of the C.O.N.I. Again, particularly for the bigger venues, plans were examined by the Inter-ministerial Committee for Sports Venues (in accordance with Law 739 dated 2/6/1939), the Rome Municipality Building Committee, the Superintendent's Office for Rome Monuments and Fine Arts and also by the Superior Council of the Ministry for Public Works.

Tenders for the work.

Contracts for the work were made by tender between reputable firms registered with the office of the Supervisor of Public Works and selected by an appropriate Committee established periodically and in accordance with the practice adopted by the Ministry for Public Works. Insofar as the Olympic Villages was concerned, the C.O.N.I., having obtained approval from the Ministry of Public Works, made special arrangements with the National Institute for the Housing of State Employees, this latter Institute being a parastatal organisation which provides housing. In fact, once the Olympic period was over, the village became an ideal residential quarter inhabited principally by State employees.

The work of construction was carried out in accordance with the regulations governing public works and a control was established by inspectors nominated and chosen, for their proven capacity, by the Ministry for Public Works.

From a town-planning point of view, the Venues were planned and built in two separate areas known as:—

(a) The North Olympic Centre, including the Foro Italico, which was situated in one of the most characteristic areas of Rome lying between the green slopes of Monte Mario and the Farnesina hills;

(b) The South Olympic Centre which was created in the area selected for the Universal Exhibition of 1942 (E.U.R.). This area was developing rapidly and had become a new suburb of Rome.

The Ministry for Public Works undertook to provide a road network linking these two centres and called the Olympic Way.

In 1928, works were started to develop the slopes of Monte Mario and surrounding areas which were soon to witness a series of modern constructions built for the holding of sports events. Later, because of the Olympic Games which were to have taken place in Rome in 1944, work was started on the building of a stadium, known as Stadio dei Cipressi, which was to be oval in shape. Unfortunately, because of the war, the Games were never held, and all work on the area was suspended. However, in December 1950 work was started by C.O.N.I. to create the new Olympic Stadium on the same site as the former one and to improve the existing venues such as the Stadio dei Marmi, the fencing gymnasium, the tennis courts and the covered swimming pool, etc.

varying from 42 to 46.50 metres. The installation has a lighting power of 425 kilowatts and illumination of the field can be graduated to exceed 300 lux units for each sq. metre of field.

The Flaminio Stadium took 80,000 work days (men \times days) to construct and did not exceed the estimated cost of 900 million lire.

Summary of technical data:—

- total area covered:— 21,650 sq. metres approx.;
- measurements of field:— 105 \times 70 metres;
- major axis:— 181 metres;
- minor axis:— 131 metres;
- dimensions of covered swimming pool:— 25 \times 10 metres with a minimum depth of 1.60 metres and a maximum depth of 1.80 m. It is air-conditioned with room temperature of 26° and water temperature of 24°

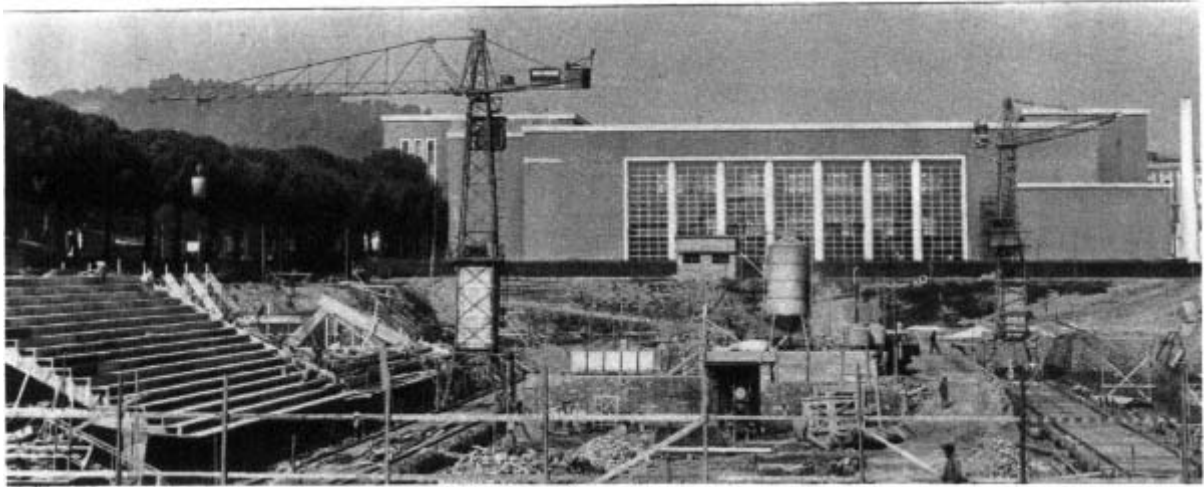

The Palazzetto dello Sport.

The Palazzetto dello Sport was the first venue to be completed under the construction plans for the Games of the XVII Olympiad and may be considered as the prototype of a sports venue of medium size built at low cost. It was with this idea in mind that the technical installations and equipment were reduced to an absolute minimum, whilst internal and external finishing touches were practical and economical. In this way a venue was created which could be used extensively for purposes of sports propaganda.

Built in accordance with a general plan by architect Annibale Vitellozzi and a project for the reinforced concrete portion by Engineer Pierluigi Nervi—under the direction of Engineer Giacomo Maccagno—this venue can be used for every kind of indoor sport.

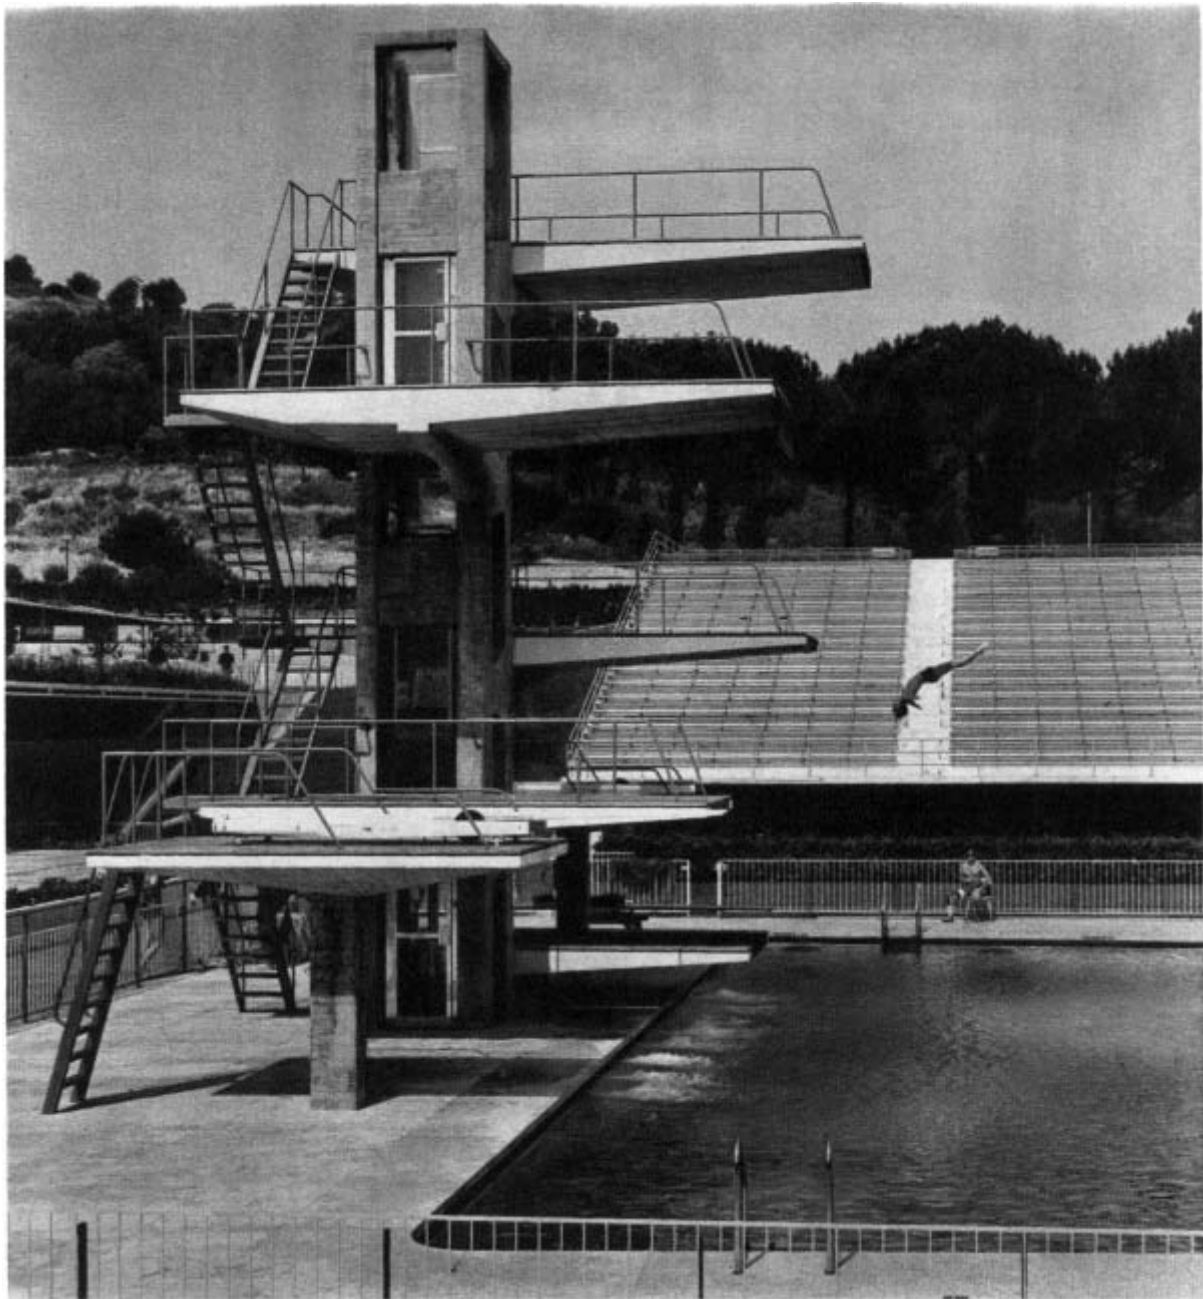

Within its precincts, apart from services for the public which include amenities, bars and a first-aid centre, there are four groups of dressing-rooms with independent entrances capable of accommodating 100 athletes, a dressing-room for competition officials, a medical sports centre, an office for the management and a press room with 12 telephone booths. There are also two large store rooms and other smaller premises. Heating and air-conditioning installations are situated in the basement.

The hall is illuminated by indirect lighting consisting of an arrangement of incandescent bulbs set in 18 metallic globes held in place by steel wiring, whilst the illumination of the arena is provided by two rows of projectors situated in the dome and which can be regulated according to the event taking place.

State of work on the Swimming Stadium in November 1958.

Olympic Swimming Stadium: the complex of springboards and the diving pool.

The dome also houses the aspirator equipment for purification of the air as well as loudspeaker equipment. Other loudspeakers to call athletes forward are situated in the dressing-rooms. Electric scoreboards with chronometers synchronised with those of the referees have been installed for basketball competitions. These same scoreboards, after slight modifications, can also be used for indoor tennis and other sports. During boxing tournaments and wrestling matches, a special chronometer situated immediately above the ring or stage indicating the timing of each bout is clearly visible to all spectators.

Seating accommodation for boxing, basketball, tennis and wrestling has been the subject of careful study. In fact, the venue can seat 3,500 persons for basketball and some 5,600 for boxing, wrestling, etc.

Outside the building, the areas in between the supporting pillars are arranged as gardens, whilst a road of 78 metres in diameter runs right the way round the venue, thus ensuring the rapid exit of the public.

The building is surmounted by a round vault of 1,620 prefabricated parts in concrete and which required 1,300 quintals of iron, 550 of which were required for the dome alone, and 9,600 quintals of cement. It covers an area of 4,776 sq. metres with a cubic capacity of 40,200 cub. m.

Construction of the Palazzetto was undertaken by the firm of Nervi & Bartoli and was started on 26th July 1956 and completed on 15th September 1957. It required 28,750 work days (men × days) and cost a total of 263,000,000 lire including furnishing and sports equipment.

Summary of technical data:—

- Area covered:— 4,776 sq. metres;
- External diameter:— 78 metres;
- Internal diameter:— 58.50 metres;
- Height from arena level to top of dome:— 21 metres;
- Seating tiers are of crescent shape, i.e. they follow the oval shape of the arena which is situated 3 metres below ground level.

The Swimming Stadium.

The Swimming Stadium is situated in the North Olympic Centre in the immediate vicinity of the covered swimming pool. It was planned by architect Annibale Vitellozzi and Prof. Enrico del Debbio. Works were directed by Prof. Cherubino Malpeli. The complex is divided into two separate zones; the first including the competition pool and respective services with seating tiers for the public whilst the second contains venues for swimming instruction and a pool for children and non-swimmers.

the " Olympiad of Civilisation ", and more commonly known by the abbreviation of " E. 42 ".

The plans for " E. 42 " were based on maps of ancient Roman towns which even today are a guide to all good town-planning. At the time it was decided to create a large new quarter which would be both classical and modern in style as well as to achieve two objectives:— to organise an exceptional exhibition and, secondly, once the event was over, to use the buildings as premises for cultural, artistic and recreational Institutes. It was thus that a really important quarter came into being, comprising magnificent buildings such as:— the Palazzo dei Congressi (Congress Palace), the Palazzo delle Scienze (Palace of Sciences), the Palazzo delle Arti Antiche (Palace of Antique Arts) and the Palazzo della Civiltà Italiana e delle Tradizioni Popolari (Palace of Italian Civilisation and Popular Traditions). All these are at present the headquarters of important Associations, cultural Institutes and Museums.

The outbreak of War prevented final touches being made to the preparation for the exhibition and brought to a standstill the building of this new quarter. However, the work accomplished was not in vain. Immediately after the War, the greater part of the original programme was carried out by the E.U.R. Directorate represented by its Commissioner, Prof. Virgilio Testa, in accordance with the plans for the new town centre, one of the important factors behind the planning being the importance of extending Rome towards the sea. Buildings, villas, trees, stairways, ornamental work, porticoes, terraces, parks and artistic fountains completed the modern quarter of the E.U.R. which, having been created for the " Olympiad of Civilisation " was soon to offer the magnificent resources of its artistic decor to the Games of the XVII Olympiad.

Palazzo dello Sport.

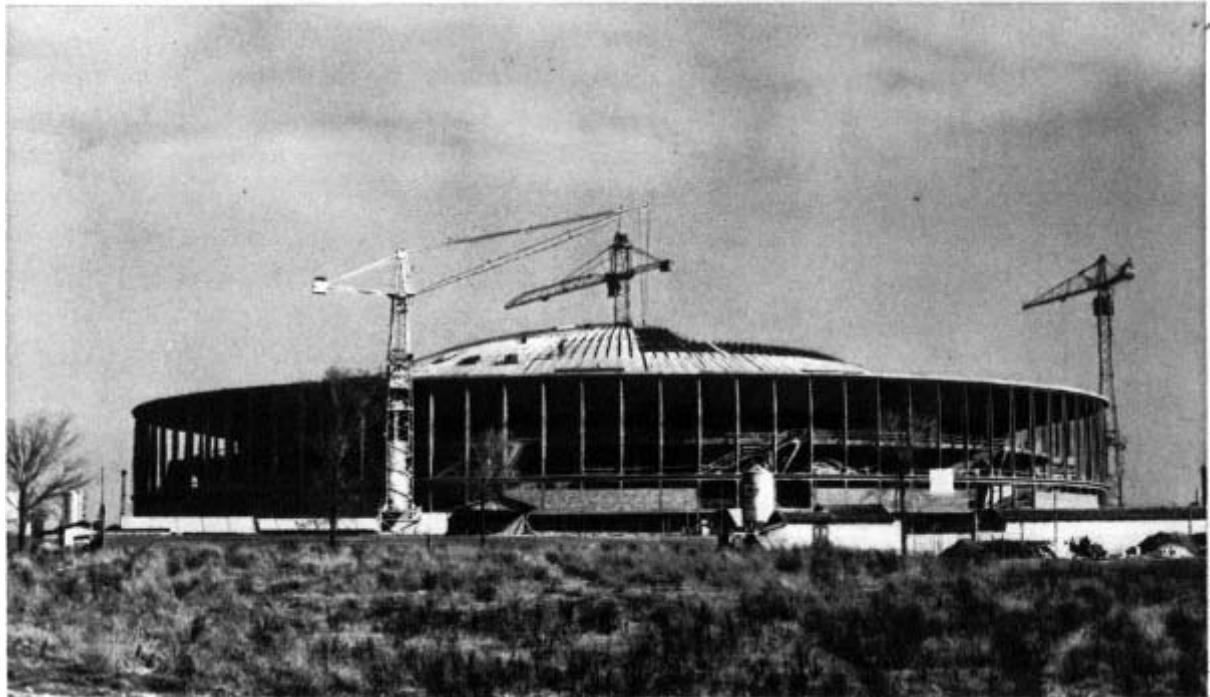

The Palazzo dello Sport rises on the hill overlooking the artificial lake and dominates the whole of the E.U.R. zone. The Viale Cristoforo Colombo, which crosses the lake in two arms, encompasses an area where besides the sports venue are included spacious parking lots and gardens. The Management of the E.U.R. completed and embellished this new construction by creating, beneath the building, a characteristic fountain which, with a series of waterfalls, set in a harmonious setting of green, goes to swell the waters of the artificial lake of some 900 metres in length.

The Palazzo dello Sport which rises behind the fountain, was planned by Prof. engineer Pierluigi Nervi and architect Marcello Piacentini, with the collaboration of architects Ezio Cosolo and Annibale Vitellozzi. The firm of engineers Nervi and Bartoli were responsible for the construction in concrete, whilst the firm Vincenzo Angrisani undertook the mural works and final touches.

*The Palazzo dello Sport under construction.
State of work on 15th March 1958.*

State of work on 29th February 1959.

The direction of works was entrusted to engineer Gustavo Baracchi, while Prof. Nervi was in charge of the study and realisation of the reinforced concrete structures which, besides carrying out their static functions, also serve to confer on the building its special bold and elegant line which is its main characteristic. The major part of the reinforced concrete structures were produced beforehand by means of a carefully planned prefabrication process. All the sections of the dome, composed of 144 evenly prefabricated fenestrated ribs, produce the effect of a considerable reduction in weight and, in addition, the possibility of introducing through the fenestrations the air required for the conditioning of the vast hall.

These sections also house 1,800 fluorescent lamps which provide the lighting for the arena. The lamps are set on the inner side of the ribs and remain carefully hidden from the direct view of the public. The lighting of the dome undoubtedly represents one of the most impressive aspects of the huge hall.

The same process of prefabrication was used for all the elements composing the tiers of seats as well as the outer support shafts of the façade, some 10 metres high, which support the vast glass walls running all round the outer gallery of the hall.

The acoustics of the hall have been carefully studied and are so good as to render possible the organisation of musical concerts.

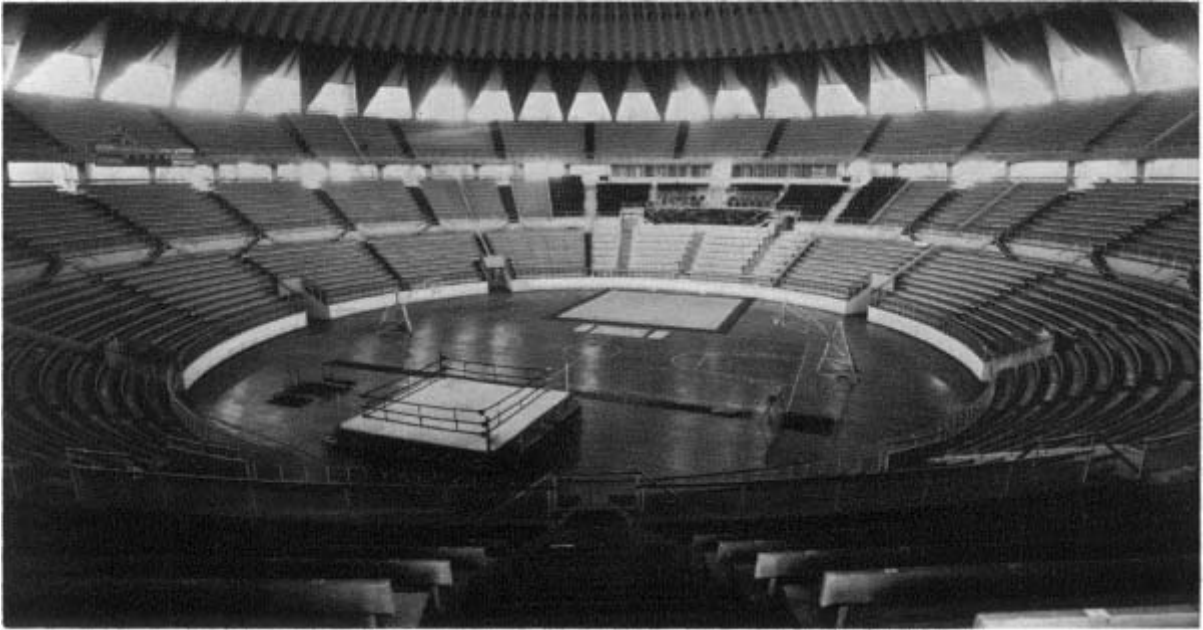

From the outside, the building appears to be encircled by a glass surface interrupted only by the shafts in reinforced concrete supporting the perimetral covering and the ribs of a graceful structure in natural anodised aluminium.

The covering of the dome consists of sheets of light green anodised aluminium with the interposition of light thermo-absorbent panels for the purpose of protecting the structure against termites.

The competition arena, 45 metres in diameter, is suitable for all indoor sports and is covered with a wooden parquet floor.

The Palazzo dello Sport is surrounded by an entrance enclosure with gates corresponding with the main external flights of steps. The public is regulated at the entrances and reaches the first sector of tiered seats having crossed the gallery or proceeds to the second sector by way of indoor staircases which lead to a vast circular terrace. In the case of both the first and the second sectors, seats are reached from the top, thus enabling the public to note what seating is unoccupied.

A special sector, which is reached from one of the exterior staircases, is reserved for Authorities and the Tribune of Honour with a total capacity of 420 seats, in addition to 196 seats reserved for the Press. The Press stands are directly linked with a large room on the ground floor 500 sq. metres in area and equipped with telephones, telegraph office, telephoto installation, teleprinters, bar, etc. Telecommentators have a series of 12 glass cabins reserved in the room raised above the seats for the Press.

The vast interior of the Palazzo dello Sport permits the holding of every kind of indoor sports meetings.

A sector of the gallery which runs right the way round the Palazzo dello Sport.

The total capacity of the Palazzo dello Sport is as much as 15,000 places, all seated, in the case of boxing events, to which access is had through broad galleries furnished with cloakrooms, bar and hygienic services.

The Palazzo dello Sport is provided with modern systems of signalling synchronised with the referees' chronometers and with those of the timekeepers, besides all the other general information and control devices required by a modern venue of this type.

The athletes are accommodated beneath the stands in 20 large dressing-rooms, all complete with showers, massage rooms and first-aid premises, whilst the competition referees are provided with meeting rooms, offices and everything else necessary for the most efficient fulfilment of their duties.

The Palazzo dello Sport is equipped with one of the largest air conditioning installations so far constructed in a public hall. The air conditioning of the hall is realised by means of 11 conditioners placed in the dome with a capacity of 600,000 cub. metres per hour. These draw conditioned air into the hall through the roof, whilst air is sucked out from under the tiers of seats, with ventilators placed in the heating plant. The Press Room possesses an independent conditioning plant.

Work involved a total expense of approx. 1,900,000,000 lire.

Summary of Technical data:—

- Area covered 11,680 sq. metres;
- Cubic capacity 300,000 cub. metres;
- External diameter 122 metres;
- Internal diameter of dome 100 metres;
- Maximum height from competition arena to dome 34.50 metres;
- Heating capacity of conditioning plant 2,600,000 cal/hr.;
- Cooling capacity of conditioning plant 1,100,000 fr/hr.

The Olympic Velodrome.

The Olympic Velodrome at the E.U.R. was planned by architects Cesare Ligini, Dagoberto Ortensi and Silvano Ricci, winners of the competition organised by the C.O.N.I. between Italian engineers and architects. The precious collaboration of the Management of the E.U.R. facilitated the task of the choice of site. Thus the building took shape in the zone of the Viale dell'Oceano Pacifico, on a total area of 65,000 sq. metres. The work was directed by engineer Francesco Guidi.

The executive plan was studied on the basis of the following special features:— a) perfect visibility from any part of the stands surrounding the

MANAGEMENT
OF OLYMPIC VENUES

The administration of the Olympic venues was entrusted to the Sports Venues Management Service of the Italian Olympic Committee which had been incorporated into the operative establishment of the Olympic Organisation.

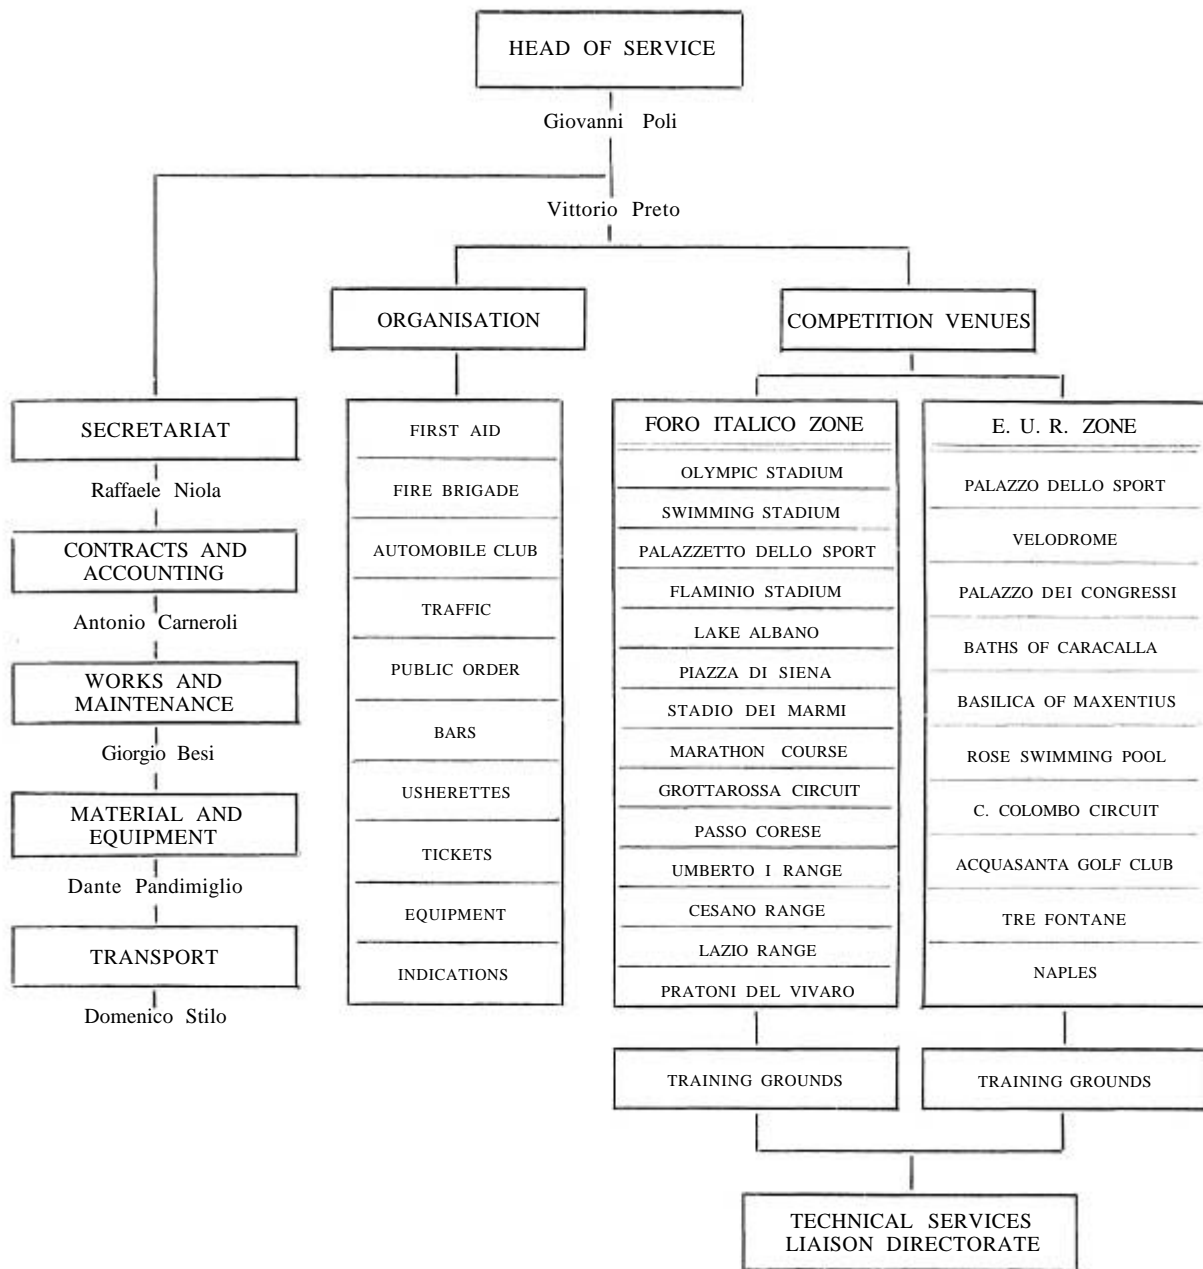

A provisional but detailed technical plan was worked out which took into consideration all problems connected with the running of the venues themselves. Obviously none of the already existing sports venues were equipped to the extent required for such a large number of athletes in competition and the venues under construction were not planned to contain technical equipment suited to such diverse requirements. The work, however, was prepared with care and there were no surprises notwithstanding the concurrence of the sports competitions and the unknown factors of the time-table (advances or postponements to the programme, delays in the holding of certain competitions).

So as to be able to execute the various responsibilities connected with management, which in any case were strictly bound to an operational work plan during the period of training and during the period when the competitions took place, the Venues Management was set up in accordance with directives laid down by the Organising Committee. The organisational chart will be found on page 98.

The Management Service, in direct agreement with the Technical Services Section, studied the equipment requirements of competition venues as well as those of subsidiary venues; it worked out a budget for the purchase of necessary material once it had made an inventory of the equipment already existing in each single venue; it established contact with the respective National Sports Federations to obtain approval, from a technical point of view, of the equipment already existing and that which had to be purchased by the Technical Services Section; lastly, is attended to the distribution of the equipment to each venue.

The organisation system of the Venues Management necessitated the employment of 815 civilians, employees and workmen, and 360 military personnel. Their various duties and the manner in which they were distributed will be seen from Table No. 1.

The personnel, most of them qualified, were trained to thoroughly acquaint themselves with the time-table of events and were also trained to know the

various phases and development of work for setting up equipment in accordance with the time available in order to avoid, particularly at crucial moments of the competitions, harmful delays in the organisation of work. These experimental measures gave rise to complete elimination or the reducing of any break or delay that would otherwise have been harmful to the steady carrying out of activities connected with the development of competitions. In fact, the programme planned permitted quick and precise allocation of technical equipment as required in the various venues.

Maintenance of the venues.

In order to ensure the smooth running of the various events, the Venues Management dedicated the greater part of its activities to daily maintenance of the fields, tracks, arenas and equipment in general so as to keep everything in perfect order. It also attended to maintenance of dressing rooms, showers, saunas and sanitary arrangements. A no less responsible task was that of installing signalling equipment and measuring devices as well as the maintenance and checking of loudspeaker apparatus and internal telephone communications.

A further duty of the Venues Management was that of attending to the night illumination of competition arenas and internal signalling requirements, as well as the maintenance of bar and restaurant services set up in each sports venue.

Special technical arrangements were catered for so as to ensure a constant supply of water, light and gas throughout. The various sports venues were linked to two separate sources of supply so that, in case of any interruption

or break, it was immediately possible to switch on the second source of supply which was held in reserve. In fact, no complaint was ever raised during the few occasions that recourse had to be had to this safety precaution.

During the period of training, in order to give athletes the maximum assistance possible, dressing rooms complete with showers had to be set up and even built, (or in certain cases improved upon). This complex of venues proved satisfactory to all concerned (Table No. 2).

So as to complete the picture of the activities undertaken for the maintenance and management of the sports venues, it should be remembered that

Work of this nature, which called for constant attention by specialised labour fully equipped for the purpose, was carried out from 15th May to 15th September 1960 (Table No. 3).

Notes on the digitized version of the Official Report of the Organizing Committee for the Games of the XVII Olympiad Rome 1960 (Volume 1)

The digital version of the Official Report of the Games of the XVII Olympiad was created with the intention of producing the closest possible replica of the original printed document. These technical notes describe the differences between the digital and printed documents and the technical details of the digital document.

The original document

The original paper version of the 1960 Official Report has dimensions of 8.3 x 11.3” (21cm x 28.7cm).

The volume’s spine is dark blue. The text “THE XVII OLYMPIAD ROME 1960 VOL. 1” appears in gold on the spine.

The book has 910 pages.

The fonts used in the digital version book for text, photograph captions and chapter headings are Times-Roman and such system fonts as best approximate the original fonts.

Special features of the digital version:

- The spine is not included in the digital version.
- Blank pages have been retained in the digital version to maintain correct pagination.
- The digital version includes a bookmark list that functions as a hyper linked table of contents. Selecting a topic heading will take you to the corresponding section in the document.

Notes on the digitized version of the Official Report of the Organizing Committee for the Games of the XVII Olympiad Rome 1960 (Volume 2)

The digital version of the Official Report of the Games of the XVII Olympiad was created with the intention of producing the closest possible replica of the original printed document. These technical notes describe the differences between the digital and printed documents and the technical details of the digital document.

The original document

The original paper version of the 1960 Official Report has dimensions of 8.3 x 11.3” (21cm x 28.7cm).

The volume’s spine is dark blue. The text “THE XVII OLYMPIAD ROME 1960 VOL. 2” appears in gold on the spine.

The book has 1072 pages.

The fonts used in the digital version book for text, photograph captions and chapter headings are Times-Roman and such system fonts as best approximate the original fonts.

Special features of the digital version:

- The spine is not included in the digital version.
- Blank pages have been retained in the digital version to maintain correct pagination.
- The digital version includes a bookmark list that functions as a hyper linked table of contents. Selecting a topic heading will take you to the corresponding section in the document.
